**IN THE ABSTRACT:**

Please replace the Abstract of the Disclosure originally filed with the above-identified patent application with the following new Abstract of the Disclosure:

## ABSTRACT OF THE DISCLOSURE

A one-port surface acoustic wave resonator includes a rotated Y-cut LiTaO<sub>3</sub> substrate, an interdigital electrode transducer disposed on the LiTaO<sub>3</sub> substrate, and reflectors disposed on both sides of the interdigital electrode transducer in the surface acoustic wave propagation direction of the interdigital electrode transducer. When the electrode finger width of the interdigital electrode transducer is denoted by  $a$  and the gap between the electrode fingers is denoted by  $b$ , the metallization ratio,  $a/(a + b)$ , is in the range of about 0.55 to about 0.85 and the interdigital electrode transducer is overlapping-length weighted.
